Towards Digital Matematics Library: from DML-CZ to EuDML

Petr Sojka

<sojka@fi.muni.cz> (FI MU, Brno)

FI MU, NLP seminar, October 6th, 2010

At the beginning there was a vision of all mathematical knowledge, *peer reviewed and verified* (100 000 000 pages) on one spot and in the digital form.

It starts to happen, but slowly: three year EU projekt EuDML (programme EU CIP-ICT-PSP, type Pilot B) from February 2010 (MU and MU AV).

As a basis serve current DML repositories as DML-CZ or NUMDAM (bottom-up build up).

Example of DML-CZ: up and running digital mathematic library with nearly 30,000 papers. For more, see (who, what, browse, browse similar, how to search).

DML-CZ - data: scientific math published in Czech and Slovak

Proof. Let \hat{K} be a cube, $\hat{K} \subset \hat{G}$; put $K = \varphi^{-1}(\hat{K})$. According to theorem 50 we have $K \in \mathfrak{A}$ and it follows from theorem 24 that

ollows from theorem 24 that

$$P(K, v) = \int f(x) dx$$
. (89)

The functional determinant T of the mapping $\psi = \varphi^{-1}$ fulfils the relation $T(\varphi(x))$, $\det M(x) = 1$, so that

$$\int f(x) dx = \int f(y(y)) \cdot |T(y)| dy = \int \hat{f}(y) dy$$
. (9)

From theorem 50 (and relation (86)) we see that $P(K, v) = P(\hat{K}, \hat{v})$; relations (89), (90) show therefore that $P(\hat{K}, \hat{v}) = \int_{\hat{I}}^{\hat{I}} (y) \, dy$, which completes the proof.

Remark. The reader may compare this paper with [6].

EuDML as a virtual library portal

EuDML will be *virtual* library based on data from smaller DLs and publishers:

- By 2013, EuDML should integrate 12 repositories, have content from 200 integrated collections (journals, book series, conference proceedings,...), more than 160,000 digital items (papers, book chapters), 500,000 links between database objects.
- It should be 'live' DL, having more than *1,000 users* contributing annotations, and more than *10,000 annotation* by 2013.
- Concept of *moving wall*: legacy data even from commercial publishers.

But how to actually implement it?

- By 2013, EuDML should integrate 12 repositories, have content from 200 integrated collections (journals, book series, conference proceedings,...), more than 160,000 digital items (papers, book chapters), 500,000 links between database objects.
- It should be 'live' DL, having more than *1,000 users* contributing annotations, and more than *10,000 annotation* by 2013.
- Concept of *moving wall*: legacy data even from commercial publishers.

Take care!

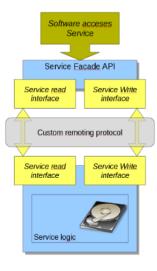

EuDML service based architecture

EuDML service based architecture II

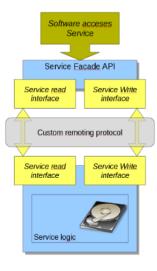

based on existing YADDA (used in Driver, Driver II) and REPOX (used in EuropeanaLocal, Telplus) projects – both are verified and mature platforms (implemented in Java)

math specifics needed to develop (T_EX to MathML converter, math OCR, math in metadata support,...

MU offers: Metadata editor and other tools and expertize, mainly to be used in *WP7 Metadata Enhancements*

EuDML: work in progress, based on DML-CZ experience and tools developed at FI and ICS during last 6 years.

Current activities: 4+ papers at DML 2010 workshop, accepted paper at LREC 2010 (with Radim Řehůřek), DocEng 2010 in Manchester,...

Next activities: EuDML working meeting in Prague in October 13–16th, and general meeting in Madrid in February 2011.

In Prague: WP7 technical meeting, tool implementation.

Working meetings at MU (LEMMA) every Tuesdays, 3PM.
